

10 HOT WORK

Hot work includes any work that creates an ignition source performed in an area which potentially contains hydrocarbons or flammable materials.

Ignition sources are open flames or sources of heat that could ignite materials in the work area such as welding, grinding, smoking, torching, (un)loading of hazardous materials, internal combustion engines, chemical reactions, batteries, etc.

- I identify and control ignition sources.

- Before starting any hot work:
 - I confirm flammable material or hydrocarbons have been removed or isolated
 - I obtain authorization (completed permit)

- Before starting hot work in a hazardous area I confirm:
 - a flammable gas test has been completed
 - the area will be monitored continually
